THE COMMISSIONER SPEAKS

"KENTUCKY SOIL TOUCHES ALL OF US"

I am pleased to present my third annual "Kentucky Agricultural Statistics". This publication is a summary of Kentucky agriculture and carries a special section highlighting the importance of agriculture by county. Most of our 120 counties rely heavily on agriculture. Fortunately, agriculture is a renewable resource. The Commonwealth is blessed with thousands of hard working, and dedicated farmers who are working through a difficult economic period. Agricultural statistics are an important way of keeping informed to ensure that proper decisions can be made in this business of farming and related agribusiness industries.

Tobacco, horses, cattle, dairy, field crops, hogs, and eggs are still the primary sources of income on the farm. However, producers are looking to vegetables and possibly fruits as ways to increase revenue on the farm. Market development is underway to develop outlets for perishable commodities produced by Kentucky growers. New market development is difficult as established producing States want to hang on and even expand their production, and industry investment capital is usually limited.

The Kentucky Agricultural Statistics Service prepares these numbers; but, we thank farmers, county agricultural extension agents, auction markets, mills and elevators, dairy plants, and other segments of the agricultural community who provide the basic information. All these data are received on a voluntary basis, tabulated, and summarized into meaningful agricultural numbers.

I appreciate the conscientious work of the staff in preparing these numbers and the extra effort required to present this publication. I hope you and the entire agricultural community find this publication a useful tool.

Sincerely,

David E. Boswell

DAVID E. BOSWELL
Commissioner
Kentucky Dept. of Agriculture

FOREWORD

Kentucky's 3.7 million people live in a State comprising 25.4 million acres. Kentucky farms totaled 100,000 in 1985, ranking it fourth nationally. Farms cover 14.5 million acres in the Commonwealth, 57 percent of the total land area. The graph below shows the downward trend in farm numbers.

We are pleased to present the 1985-86 "Kentucky Agricultural Statistics". This publication is a summary of agricultural numbers for a year including many County, State, and National agricultural statistics.

The State-Federal agreement between USDA and the Kentucky Department of Agriculture provides for the funds to prepare and publish these agricultural numbers. This year the U.S. Department of Agriculture changed the name of our Central Agency from Statistical Reporting Service to the National Agricultural Statistics Service. In turn, the Kentucky Crop and Livestock Reporting Service name was changed to the Kentucky Agricultural Statistics Service. The new name fits well with the wide range of agricultural statistics gathered and disseminated; and, the new name is almost identical to the name of this publication which has been issued annually for nearly thirty years.

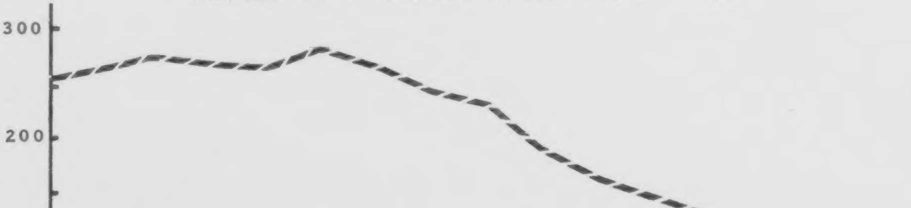
In closing, I would like to give a sincere thanks to the many voluntary reporters. They have furnished the needed inputs into agricultural surveys so that we can compile the data into accurate agricultural statistics. The contribution of these voluntary reporters is especially gratifying during these difficult economic times. Production was the key word of the 70's, but marketing is becoming increasingly important. Management decisions are made by each producer and each agri-business enterprise and our goal is to furnish reliable statistics so decisions can be based on the best possible facts.

Sincerely,

Dave Williamson

DAVID D. WILLIAMSON
Agr'l Statistician in Charge

NUMBER OF KENTUCKY FARMS 1910 - 1985



CROPS

1985 CROP HIGHLIGHTS

HARVESTED CROP ACREAGE

Kentucky farmers harvested 5.5 million acres of field crops and hay in 1985, down 3 percent from the previous year. Of the State's major crops, acreage of soybeans, tobacco and wheat were lower, while corn, sorghum grain and hay posted increases.

BURLEY TOBACCO

Kentucky farmers produced 395.3 million pounds of burley tobacco in 1985, a decrease of 20 percent from 1984. Harvested acreage declined to 170,000 from 210,000 a year earlier, while yield per acre averaged 2,325 pounds, down 15 pounds from 1984. The final 1985 production estimate is basically a utilized production of sales plus ASCS carryover. Shelby County was the State's leading burley producer with 12.7 million pounds. Second-ranked Bourbon County produced 12.6 million pounds. Rounding out the top five producing counties were Fayette, Scott and Woodford Counties.

The 1985 burley crop benefited from an early spring and favorable weather during much of the growing season. Most areas of the State experienced short moisture sometime during the season, but timely rains limited crop damage. Temperatures were below or near normal for most of the spring and summer, which also helped limit plant stress.

Burley tobacco setting began much earlier than normal with a few growers setting plants as early as the first week of May. Setting was active across the State by May 19 and was virtually complete by June 24. Setting progress was the earliest on record. Very little resetting was necessary. The crop was rated in mostly good to excellent condition throughout the growing season. Hot, dry weather in late July and early August caused some plant stress, but mid-August rains brought some relief. Insect and disease problems were generally light to moderate. A number of counties reported Blue Mold activity and Black Shank was a continuing problem.

Some burley was cut by August 4, and harvest was active Statewide by August 18. Normally cutting is just beginning by then. Harvest continued at a more rapid than normal pace and was nearing completion by September 29. Good curing weather allowed stripping to begin by October 1 in some counties. Burley markets opened November 25 with an adequate supply of tobacco available. Markets were recessed from January 14 to February 3, 1986 as unusually dry weather curtailed preparing tobacco for market. Production exceeded quotas on many farms, and producers had to place the excess in storage. Unmarketed 1985 production was estimated at about 45 million pounds. The 1985 crop averaged $159.90 per cwt., down $28.50 from 1984. A sharp drop in support price levels caused the decline; however, the no net cost was reduced to 4 cents a pound. The 1985 crop was valued at $632 million.

DARK FIRED AND DARK AIR-CURED TOBACCOS

Production of dark type tobaccos in Kentucky declined in 1985. Lower harvested acreage and yields below the 1984 record highs combined to cause the drop. Average prices received also fell.

Type 22, Eastern Dark Fired, tobacco production totaled 10.6 million pounds, down 8 percent from 1984. Yield per acre averaged a record 2,045 pounds, a 25 pound increase from the previous record set in 1984. Harvested acreage dropped 9 percent to 5,200 acres. Christian and Trigg Counties were again the leading producers. Producers received an average $146.00 per cwt., down from $157.10 for the 1984 crop.

Type 23, Western Dark Fired, tobacco production declined to 9.6 million pounds compared to 10.97 million in 1984. Yield was down 20 pounds to 2,050, and acres harvested fell 11 percent to 4,700 acres. Calloway and Graves Counties led the State in production. Prices averaged $146.00, off $9.70 from 1984.

Type 35, One Sucker Dark Air Cured, tobacco yielded 2,050 pounds on 4,100 acres, both down from 1984. The resulting production of 8.4 million pounds was down 19 percent. The leading producing counties were Logan and Simpson. The average price fell $2.10 to $128.50.

Type 36, Green River Dark Air Cured, tobacco production dropped 23 percent to 4.5 million pounds. Acres harvested, at 2,300, was down 15 percent and the yield of 1,950 pounds was 220 pounds below the 1984 record high. Daviess and McLean were the leading producing counties. Type 36 averaged $119.00 per cwt. compared to $120.70 in 1984.

CORN

Corn for grain production in Kentucky totaled a record high 159.1 million bushels, 9 percent more than the 1984 crop and 4 percent above the previous record set in 1982. Acres harvested for grain, at 1.56 million, was the largest since 1959, and the average yield per acre of 102 bushels was only one bushel below the record set in 1982. Acreage cut for silage fell 3 percent to 165,000 acres.

Union County retained its status as the State's leading corn grain producing county with 8.9 million bushels harvested from 80,600 acres. Henderson County moved back into the number two position, producing 8.5 million bushels on 79,700 acres. Daviess County was third with 8.1 million bushels. Ballard and Hickman Counties had the highest average yields with 115 bushels per acre.

Corn planting began early and advanced rapidly, in sharp contrast to the slow progress in the wet spring of 1984. Planting was active in most western and southern counties by the second week of April. By May 27, planting was 90 percent complete, compared to an average 73 percent. In the last decade, planting progressed quicker in only the 1976 and 1982 crop years. The crop was rated in mostly good to excellent condition throughout the growing season. Development progress was ahead of normal for most of the season. Hot, dry weather moved into the State just as much of the corn acreage was silking. Scattered rainfall brought some relief, but the stressful conditions had already caused some yield losses.

A few fields were harvested for grain by August 18. Harvest became active by mid-September and progressed rapidly thanks to generally dry weather. However, slow crop dry-down held up harvest in some fields. Wet weather moved into the State in late October and slowed harvest considerably. By Thanksgiving, 88 percent of the acreage was harvested compared to 94 percent on average. Dry weather during December allowed most fields to be harvested before yield losses became severe.

White corn production totaled 7.4 million bushels, down from 10.5 million in 1984. Harvested acreage fell 30 percent to 82,000 acres, while yield held steady at 90 bushels per acre.

SOYBEANS

Kentucky farmers produced 41.8 million bushels of soybeans in 1985, 1 percent less than in 1984. Harvested acreage fell 16 percent to 1.23 million acres. This drop was nearly offset by a record high yield of 34 bushels per acre. The previous yield record was 32.5 bushels in 1979.

Logan County was the State's leading soybean producer in 1985 with 2.7 million bushels and an average yield of 38 bushels per acre. Christian County moved into the number two position with 2.6 million bushels and Daviess County was third. Henderson and Graves Counties were fourth and fifth, respectively.

Planting of single crop soybeans began in a few areas the first week of May and was active by the middle of the month. Planting progressed at a better than normal pace through early June. Wet conditions then slowed planting through mid-month. Drier weather moved into the State by late June, allowing planting to again advance quickly and planting was virtually complete by July 14. Double-cropped acreage was down as less small grain acreage was seeded in the wet fall of 1984. Crop condition was rated mostly good throughout the growing season and the State's soybeans developed rapidly. A few early fields were harvested by September 15, but harvest progressed slowly and was behind normal most of the fall. Wet weather hampered harvest from late October through November. Drier conditions during December allowed most of the remaining acreage to be harvested.

OTHER CROPS

Wheat production in 1985 totaled 10.5 million bushels, 45 percent below 1984. Wet conditions during the fall of 1984 prevented the seeding of many fields. Harvested acreage fell to 310,000 compared to 500,000 a year earlier. Yield was also lower, averaging 34 bushels per acre, 4 bushels below 1984. Logan County moved up from second to become the State's leading wheat producing county, while Christian County fell to number two. Simpson, Calloway and Graves Counties rounded out the top five. The fields that did get seeded suffered minimal winter freeze damage and grew well throughout the spring. Rust and other diseases became problems in many fields. Harvest began in mid-June and was virtually complete by July 14.

Hay production in Kentucky was up 23 percent from 1984, to 4.1 million tons. Alfalfa hay production contributed 900,000 tons to the total, up from 736,000 tons a year earlier. Yield averaged 3.6 tons per acre compared to 3.2 in 1984 and harvested acreage was up 9 percent to 250,000. Production of all other hay totaled 3.2 million tons, up 23 percent from 1984. Yield was also up, averaging 2.0 tons per acre compared to 1.8 tons a year earlier. Harvested acreage was up 10 percent to 1.6 million. Much of the first hay cutting was of reduced quality after being rained on or cut over-ripe because of wet fields. Periods of hot, dry weather at midsummer kept some later cuttings light, but overall both quantity and quality were good. Most areas entered winter with adequate hay supplies.

Kentucky grain sorghum production rose again in 1985. Production totaled 11.4 million bushels, up 24 percent from 1984. Harvested acreage increased from 115,000 in 1984 to 143,000 in 1985, while yields held steady at 80 bushels per acre. The acreage increase was the fifth consecutive increase and follows the jump from 41,000 acres in 1983 to 115,000 in 1984. Barley production was down in 1985 to 910,000 bushels from 1,110,000 in 1984. Both harvested acres and yield were below the previous year. Limited amounts of oats and rye were produced in Kentucky. Most of the acreage sown to these two crops is used for a cover crop.

APPLES & PEACHES

Utilized production of commercial apples in Kentucky totaled 15.0 million pounds in 1985, down 9 percent from the previous year. Some growers experienced winter freeze damage, but the quality of the crop was good in most localities, but not so good in others. Price was up nearly a penny per pound compared with 1984. The 1985 value of utilized production, at $2.1 million, was 4 percent below the previous year.

Peach growers in Kentucky harvested no significant commercial production in 1985 due to severe cold. Sub-zero temperatures also destroyed bud formations and caused some considerable tree damage in many areas. Extreme cold weather has resulted in reduced production or none at all for most growers for the last four years. Nationally, utilized peach production was down 17 percent from 1984.

KENTUCKY APPLE AND PEACH UTILIZED PRODUCTION AND VALUE 1983-1985

WEATHER CROP SUMMARY - 1985

After one day of 70 degree temperatures throughout much of Kentucky, January 1985 turned into one of the coldest Januarys on record. Temperatures averaged 7-8 degrees below normal, dropping to a low of -24 degrees on the 21st. Precipitation of less than 3 inches was about 70 percent of normal. Monthly snowfall measured from 6 inches in the East up to two feet in several western locations.

Unseasonably cold weather remained in the region during the first half of February, giving way to gradually increasing temperatures that rose into the 70's by month's end. Overall, temperatures averaged 4 degrees below normal with precipitation about one inch below normal. The season's heaviest snowfall blanketed most of Kentucky between the 11th and 13th with some eastern locations receiving nearly two feet.

Average temperatures during March ranged from between 5 degrees above normal in the West to 2 and one-half degrees above normal in the East. Precipitation was about 2 inches below normal in all but the Bluegrass region.

Weather conditions varied greatly during the first two weeks of April. Cool temperatures at the beginning of the month warmed into the 80's by the middle of the 1st week, spawning severe weather at some locations. Extremely cold weather re-entered the region on the 9th with night-time lows dipping into the low 20's and upper teens. Scattered snow was reported from Henderson to Pikeville. Unseasonably mild weather returned for the remainder of the period. Precipitation for the month was slightly above normal in the West, but 1 to 2 and one-half inches below normal for the rest of the State.

Although rainfall was slightly above average for May at 4.51 inches, fieldwork continued to progress ahead of normal. Some precipitation fell each week throughout the State with the Western locations receiving the heaviest amounts. Eastern locations were still short of moisture at the end of the month. Temperatures were slightly warmer than normal at 65.9 degrees. The temperature dropped to freezing level in the State for the final time on the 5th.

The first two weeks of June were above average in temperature, while temperatures the last three weeks averaged below normal. Monthly average temperature was 1.2 degrees below normal. Precipitation was widespread the first half of the month. Field activities were generally delayed. Precipitation averaged 4.56 inches, almost one-half inch above normal.

Moisture conditions were mostly adequate during the first week of July; however, as the month progressed soil moisture became short. The hot, humid weather at mid-month was broken intermittently by widely scattered thunderstorms. The month ended with precipitation .66 inch below normal. Temperatures were seasonable with daytime highs between 85 and 95 degrees and night-time lows generally in the 60's.

Widespread rain fell over most of the State each week in August with one reporting location receiving over 12 inches of rain. Rainfall for the month averaged 5.8 inches, 2 inches above normal. August rains were especially beneficial for soybeans and late tobacco. By the end of the month, all sections of the State were reporting soil moisture supplies adequate to surplus. Temperatures averaged 74 degrees, 1.5 degrees below normal.

September was dry the first three weeks. Rainfall was scattered and light, except severe from remnants of Hurricane Elena in some Western counties. Paducah received over 7 inches of rain on September 5th. During the last week of September, general rainfall was received; however, precipitation averaged only 2.3 inches or 1.2 inches below normal.

October was characterized by a roller coaster of temperatures mixed with rain. Temperatures varied from the mid-80's to the low 30's. The monthly average temperature of 61 degrees was 4 degrees above normal. Rainfall was generally associated with cold fronts and averaged almost 5 inches, over 2 inches above normal.

Tropical air associated with Hurricane Juan swept into Kentucky the first few days of November. High temperatures reached into the upper 60's and 70's. Rainfall was generous with one inch or more for the week. The heaviest rain fell over West Kentucky averaging more than three inches. Henderson reported about 5 inches. Rainfall averaged 5.4 inches, almost 2 inches above normal. The first crop killing frost for much of the State was November 8. Temperatures averaged 54 degrees, almost 8 degrees above normal.

Early December saw mild temperatures and precipitation above normal. Cold fronts moved through on the 10th and 13th with the second front producing light snow in Northern Kentucky. First significant snowfall of season was received week ending December 23. The coldest recorded December temperature was -5 degrees on December 21 in Shelbyville.

1986 TILLAGE PRACTICES

The use of conservation tillage practices on corn and soybean acreage in Kentucky fell in 1986 from the levels reported in 1983. Information on tillage practices and double cropping was collected on the June Acreage Survey. Conservation tillage, no till or minimum till, was used on 46.3 percent of the State's soybean acreage in 1986 compared to 51.7 percent in 1983 and 48.3 percent in 1981. Much of this decline is likely due to the drop in wheat acres from 1983 levels. Corn was planted no or minimum till on 43.2 percent of the acreage, down from 44.6 percent in 1983 but up from 34.2 percent in 1981. No till was used on 26.4 percent of the soybean acreage down from 36.0 percent in 1983. Minimum-till acreage went up from 15.7 to 19.9 percent. Corn acreage planted no-till accounted for 19.4 percent of the total, down from 21.9 percent in 1983. Minimum till practices rose to 23.8 percent of the acreage, up from 22.7 in 1983.

The June Acreage Survey indicated 226,000 acres of soybeans were double cropped in 1986, accounting for 20.5 percent of total plantings. In 1983, 38.3 percent, 575,000 acres were double cropped and in 1981, 40.9 percent of the soybean acreage followed another crop. Most of the double crop acreage, 85 percent, was planted no-till. Double cropping of corn was limited to 3.4 percent of total acreage. Most of the double crop corn is planted in Central and Bluegrass counties and often utilized as silage.

Conservation tillage of sorghum acreage rose slightly from 1983. Survey data for sorghum was somewhat limited, but indicated about 50 percent of the acreage was no or minimum till compared to about 45 percent in 1983.

OFF - FARM GRAIN STORAGE CAPACITY

Capacity of off-farm commercial grain storage in the Nation totaled 8.25 billion bushels on January 1, 1986. This is an increase of 1.7 percent from a year earlier. Expansion of capacity occurred during the year in 29 States and New England, 11 States registered declines, and 2 States continued unchanged. Illinois ranked number one in total storage capacity. It was followed by Iowa, Kansas, Texas, and Nebraska. These top five States together accounted for 52 percent of the Nation's off-farm grain storage capacity. Off-farm storage capacity for Kentucky was up less than one percent from a year ago, and the State ranked 28th among the other States reporting capacity.

State capacity data include all elevators, warehouses, terminals, merchant mills, other storage and oilseed crushers which store grain, soybeans, sunflower seeds or flaxseed.

NUMBER AND CAPACITY OF OFF-FARM STORAGE FACILITIES
SELECTED STATES, JANUARY 1, 1985 - 86

STATE	NUMBER OF FACILITIES 1/ 1985 REVISED	NUMBER OF FACILITIES 1/ 1986	RATED OFF-FARM STORAGE CAPACITY 1985 REVISED	RATED OFF-FARM STORAGE CAPACITY 1986

UNITED STATES	13,921	13,770	8,113,670	8,249,120

1/Data users are advised that some differences may exist between States in the procedure for making counts of facilities in the grain storage universe. In a few instances, the count includes only the headquarters which reports for more than one facility. This does not affect data on total capacity.

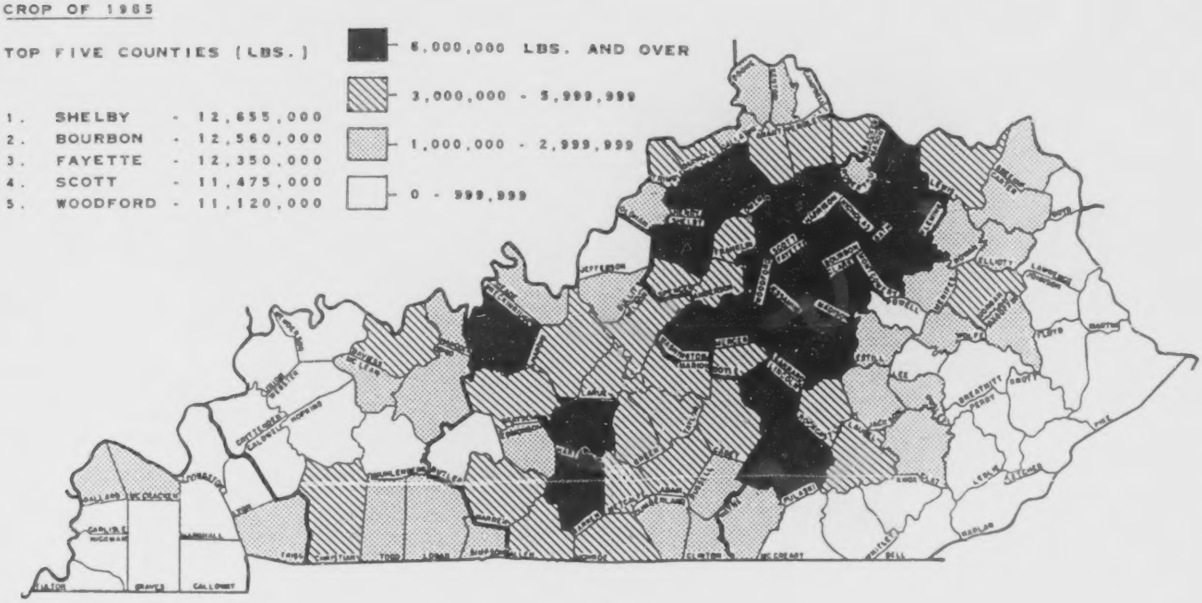
BURLEY TOBACCO PRODUCTION



■ 6,000,000 LBS. AND OVER
▨ 3,000,000 - 5,999,999
░ 1,000,000 - 2,999,999
□ 0 - 999,999

CROP OF 1985

TOP FIVE COUNTIES (LBS.)

1.	SHELBY	12,655,000
2.	BOURBON	12,560,000
3.	FAYETTE	12,350,000
4.	SCOTT	11,475,000
5.	WOODFORD	11,120,000

The 1985 burley crop was generally large, and many producers marketed their quota plus 10 percent.

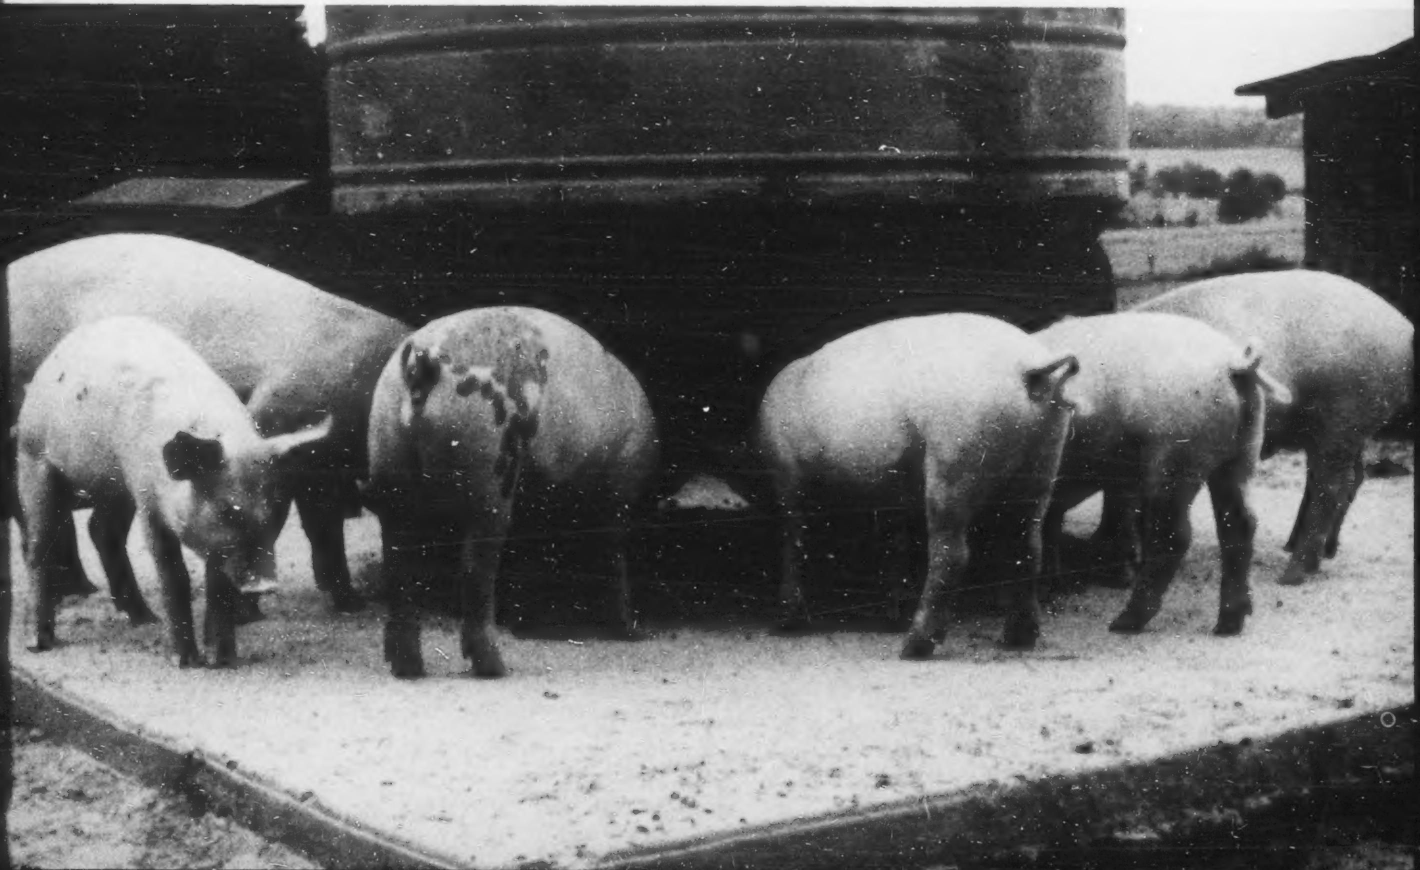
LIVESTOCK



LIVESTOCK HIGHLIGHTS

CATTLE AND CALVES

Kentucky's cattle numbers declined again in 1985. On January 1, 1986 cattle and calves on Kentucky farms totaled 2.48 million head, down 4 percent from a year earlier. Cattle inventory for the State is the lowest since 2.45 million head in 1966. Over the past eleven years, cattle numbers have been in a downward trend after peaking at 3.75 million in 1975. Cows and heifers that calved on Kentucky farms totaled 1.21 million head, 5 percent below 1985 and the lowest cow inventory since 1962. Beef cow inventory was down 6 percent from last year while milk cows were up 1 percent. Kentucky's beef replacement heifers were 2 percent below 1985 and milk replacement heifers were down 15 percent from a year ago. Total heifer inventory was down however, less than 1 percent due to an increase of 18 percent for other heifers. The 1985 Kentucky calf crop at 1.11 million, down 5 percent from 1984, was the smallest in 23 years. Cash receipts to Kentucky cattle farmers totaled $395.3 million during 1985, an increase of 3 percent from 1984. The increased cash receipts resulted from increases in price per 100 pounds for both cattle and calves, in spite of a 2 percent decrease in marketings.

HOGS AND PIGS

Kentucky's hog numbers declined also in 1985. As of December 1, 1985 all hogs and pigs on Kentucky farms numbered 800,000 head, down 9 percent from a year earlier. This is the smallest end of year hog and pig numbers for Kentucky since records began in 1867. Breeding inventory is estimated at 124,000 head, down 6 percent, while market hog inventory is estimated at 676,000 head, down 10 percent. Kentucky farmers farrowed 183,000 sows and produced 1.35 million pigs in 1985. During December 1984 - May 1985, 91,000 sows farrowed 673,000 pigs and during June-November 1985, 92,000 sows farrowed 681,000 pigs. Cash receipts to Kentucky hog farmers during 1985 totaled $138.3 million, a decrease of 8 percent from 1984. The decrease in cash receipts to farmers resulted from a combination of fewer hogs being marketed and less money received per animal. Marketings of 298.3 million pounds were off 2 percent from 1984, while average price of $44.80 per 100 pounds was off $3.30.

SHEEP AND LAMBS

Sheep and lambs on Kentucky farms remained unchanged from a year earlier at 27,000 head. Ewes one year old and older at 22,000 head were also unchanged. The 1985 lamb crop totaled 26,000 (an increase of 1,000 lambs from 1984). Cash receipts to Kentucky farmers of $1.21 million were up 10 percent from 1984. The increase resulted from improved lamb prices of $7.00 per 100 pounds, in spite of a 5 percent decrease in pounds marketed.

POULTRY

The December 1, 1985 all chicken inventory (excluding broilers) numbered 3.34 million birds, up 28 percent from a year earlier. Hens and pullets of laying age totaled 1.81 million, down 2 percent from December 1984. During 1985 Kentucky's chicken flocks produced 431 million eggs, down less than 1 percent from the 1984 production. Broiler production for 1985 numbered 3.18 million birds, an increase of 6 percent from 1984.

Egg production has become a very specialized industry.

COMMERCIAL MINK PRODUCTION

Commercial mink production by Kentucky farmers continues to be small in size. As a result, State estimates are not published to avoid disclosing individual operations. Mink production on a National basis continues to be an important specialized type of agriculture. In 1985 mink pelt production totaled 4.17 million pelts, down 1 percent from 1984. Wisconsin, the major mink State, produced 1.18 million pelts for 28 percent of the Nation's total. Minnesota continued to be second in production with 571,000 pelts, while Utah continued in third place with 502,000 pelts. The 1985 mink production came from 1,042 farms, down 42 from 1984.

Of the 4.17 million pelts produced, over one-third were the Standard (dark brown) color class. Other important color classes included: Demi-Buff (light brown) - 19 percent, Ranch Wild (dark brown) - 12 percent, Pastel (natural brown) - 8 percent, Violet (natural blue gray) - 5 percent, Gun metal (gray) - 4 percent, and Pearl (natural pale beige) - 4 percent.

The mink pelts sold during the 1985 crop year were valued at $126.40 million, down 3 percent from 1984. Average price per pelt for the 1985 crop year was $30.30 compared with $30.80 in 1984 and $29.90 in 1983.

Female minks bred to produce kits in 1986 totaled 1.07 million, down 4 percent from 1985. Females bred for the two major color classes are: Standard - 486,000 and Demi-Buff - 155,000. Females bred in the leading mink States are: Wisconsin - 291,000; Minnesota - 146,000; and Utah - 144,000.

Mink are unique farm animals. They are flesh eating members of the weasel family. Mink have only one breeding season a year and the young (kits) are born in May in litters numbering 1 to 8. The kits show exceptional growth and in 3 to 4 weeks equal the weight of the mother. This is equivalent to a cow producing a 1,000 pound calf in less than a month's time. The mink's winter coat, produced from August to December, is pelted in late fall and early winter when its fur is at its prime.

DAIRY

DAIRY HIGHLIGHTS

MILK COWS AND MILK PRODUCTION

The average number of milk cows on Kentucky farms during 1985 was 231,000 head, 1 percent less than the 234,000 head in 1984. The average number of farms with milk cows decreased by 500 during 1985 to 8,500. The average annual output per cow was 9,619 pounds, up 619 pounds from the previous year. Total milk production of 2.22 billion pounds during 1985 was 6 percent above the 2.11 billion pounds produced one year earlier. The major producing counties were Barren and Shelby, followed by Nelson, Fleming, Hart and Adair.

Quantity of grain and other concentrates fed to milk cows in Kentucky during 1985 totaled 556,000 tons, 1 percent more than 1984. This equals 4,810 pounds per cow or 50 pounds per hundredweight of milk. In 1985 the average value of feed per cwt. was $7.62, down 12 percent from the $8.69 value in 1984.

MILK DISPOSITION AND INCOME

Of the total 2.22 billion pounds of milk produced during 1985, 2.11 billion pounds (or 95 percent) were sold to plants and dealers. The remaining 109 million pounds produced were used on farms as milk, cream and butter and fed to calves and other livestock. While milk marketings increased 7 percent from 1984, on-farm use of milk decreased 14 percent.

The 2.11 billion pounds of milk marketed by Kentucky farmers consisted of 86 percent fluid milk and 14 percent manufacturing grade milk. Fluid grade deliveries totaled 1.82 billion pounds during 1985, up 7 percent from the previous year. Manufacturing grade deliveries increased 2 percent in 1985 to 287 thousand pounds.

Kentucky's 2.22 billion pounds of milk production was valued at $284 million, based on the average return per hundredweight of milk sold plus the value of on-farm consumption. The 1985 value was less than 1 percent above the $282 million value in 1984.

The annual average price per cwt. of milk sold was $12.80, sixty cents below 1984. Fluid milk prices averaged $13.10 per cwt., while manufactured grade milk prices averaged $11.20 per cwt. Both declined 4 percent from their respective levels of the previous year. Cash receipts from all dairy products marketed by farmers in 1985 totaled $270.5 million, up 2 percent from the previous year.

MANUFACTURED DAIRY PRODUCTS

Total cheese production in Kentucky (excluding cottage cheese) equaled 52.4 million pounds during 1985, representing an increase of 26 percent from the 41.5 million pounds produced during 1984. The manufacture of American type cheeses increased 42 percent above the prior year, totaling 34.7 million pounds. Cheddar cheese (with 25.8 million pounds produced in 1985) accounted for 74 percent of this production. Other American type varieties, such as Colby, accounted for the remaining 26 percent with production of 8.8 million pounds. Nationally, Kentucky ranked 10th in cheddar cheese production, 11th in the manufacture of American type cheeses, and 15th in total cheese production.

Kentucky's 29 plants produce a wide variety of manufactured dairy products, including other type cheeses and butter, frozen products, dry milk products, whey products and condensed and evaporated milk. Production levels for these products are not published to avoid disclosure of individual plant production.

FARM INCOME

FARM INCOME HIGHLIGHTS

CASH RECEIPTS

Kentucky farm products sold during 1985 generated cash receipts of $2.87 billion, up 6 percent from 1984. Livestock and livestock products accounted for 47.1 percent of the total with crop sales making up 52.9 percent.

Crop cash receipts totaled $1.52 billion in 1985, up 18 percent over 1984. Tobacco receipts valued at $858 million, accounted for 29.9 percent of the total cash receipts. Tobacco was again the leading commodity in cash receipts. Corn receipts valued at $291 million, showed the largest gain over 1984 with a 77 percent increase. Soybean cash receipts, valued at $243 million, accounted for 8.5 percent of the total cash receipts and increased 9 percent over the previous year.

Livestock cash receipts in 1985 totaled $1.35 billion, down 4 percent from the year before. Cattle and calves, dairy products, and sheep and lambs receipts showed increases with 3 percent, 2 percent and 10 percent gains respectively. Egg receipts declined the most at 81 percent of the 1984 level. Horse sales and stud fees totaled $520 million in 1985, down 10 percent from 1984. Horse receipts made up 18.1 percent of the total cash receipts for the State, second only to tobacco.

PRICES RECEIVED BY KENTUCKY FARMERS

Prices received by agricultural producers in Kentucky were generally depressed for 1985 in comparison to the previous years. The only increase in 1985 season average prices over 1984 were seen in prices received for beef cattle, steers, heifers and calves and milk cows. Corn, for the 1985 marketing year, averaged $2.55 per bushel, down 27 cents from the 1984 season average. Wheat prices averaged $2.90, down 40 cents from 1984, while soybeans were down 67 cents to $5.40 per bushel. The season average price for hay dropped to $70.00 per ton, $8.50 lower than 1984 and $14.00 lower than the record high in 1983. Burley tobacco for the 1985 marketing season averaged $1.599 per pound, down 28.5 cents per pound from the 1984 record high of $1.884. All of the dark tobaccos showed a decline in price ranging from 1.7 to 11.1 cents per pound.

Cattle prices were generally higher in 1985 on average than in 1984. Cow prices were the exception with a price of $35.40, 80 cents down from 1984. Beef cattle averaged $46.40 per cwt., $1.40 up from the 1984 average of $45.00. For 1985, steers and heifers were up $2.40 to $53.30 and calves averaged $57.30, up $4.40 from 1984. Milk cows averaged $15.00 per head higher at $775, while milk prices showed declines betweeen 50 and 60 cents per cwt. Hog prices were down to $44.80 on average for the year, $3.30 below the previous year. Egg prices were 51.7 cents per dozen, down 14.1 cents from the record high of 65.8 cents in 1984.

PRICES PAID BY KENTUCKY FARMERS

The trends in prices farmers paid for materials used in production during 1985 were mixed to lower from a year earlier. Prices for farm machinery, and motor supplies and equipment were mixed, while fertilizer and pesticides, feed, building materials and farm supplies were generally down from 1984 averages. In Kentucky, feed prices were down with the largest decline shown in cottonseed meal, at $10.30 per cwt., 33 percent down from a year ago. Soybean meal was also down considerably to $9.60 per cwt., 25 percent below the 1984 level. Stock salt was the only feed item showing an increase at $7.70 per cwt., 8 percent up from 1984. While gasoline and motor oils were generally lower in price. Other motor supplies showed an increase over last year. Truck tires increased 16 percent over last year and tractor tires were up 10 percent. U.S. estimates for building materials, farm supplies, machinery and chemicals were mixed to mostly down.

KENTUCKY CROP VALUES - 1985

The value of crops produced by Kentucky farmers in 1985 totaled $1.6 billion, down 18 percent from the 1984 value. Lower prices for almost all commodities along with lower production of several crops caused the decline. The only crops posting value increases from 1984 were hay, sorghum grain and oats. For all three crops, increased production offset lower prices. Apples were the only crop showing a price increase from 1984. Production declines and lower prices reduced the value of the tobacco, wheat, barley, rye and soybean crops. Higher production could not offset lower prices for corn and hay. The largest changes in value were for wheat and rye, down 51 percent; barley, down 39 percent; soybeans, down 13 percent; corn, down 3 percent; oats, up 31 percent; and sorghum grain, up 12 percent.

Five major crops (tobacco, corn, hay, soybeans and wheat) accounted for 98.3 percent of the total value of all crops produced in 1985. Tobacco continues to be the State's leading crop, though its share of the total fell from 49 to 41.2 percent. Kentucky's tobacco crop accounted for 27 percent of the total U.S. tobacco value, down from 31 percent in 1984. Corn, hay and soybeans posted increases in their shares of the State's total value of crop production, while wheat declined. Nationally, the leading crops in terms of value of production were corn, soybeans, hay, wheat, cotton and tobacco.

CASH RECEIPTS BY COUNTY - 1984

Nine Kentucky counties each generated over $50 million in cash receipts from farm marketings in 1984. The number one county in the State continued to be Fayette with $279.9 million. This one county accounted for 10 percent of Kentucky's total cash receipts. Horse sales made up the major portion of Fayette's receipts. Bourbon again ranked second with $134.5 million. Horse sales again accounted for the largest share of the cash receipts of Bourbon County. The other seven counties with receipts of $50 million plus were Woodford, Shelby, Scott, Barren, Logan, Christian and Daviess. The above nine counties with cash receipts totaling $865.5 million accounted for 32 percent of the State's 1984 cash income from farm marketings.

The top five counties in livestock cash receipts are all located in the Bluegrass Crop Reporting District. They include Fayette, Bourbon, Woodford, Scott and Shelby Counties. Horse sales accounted for the largest portion of receipts in the first four counties with dairy products the largest in Shelby County. These five livestock counties accounted for 38 percent of the State's livestock receipts. The number one livestock commodity sold in 1984 was horses and mules. With cash receipts totaling $580.0 million, horses and mules accounted for 41 percent of all receipts from the sale of livestock commodities.

The five top counties in crop cash receipts were Daviess, Christian, Logan, Graves and Henderson Counties. Tobacco was the leading commodity sold in Daviess and Christian Counties, while soybeans was the leading commodity sold in Logan, Graves, and Henderson Counties. The above top five crop counties accounted for 14 percent of the State's crop receipts. Tobacco continued to be the number one crop commodity sold in Kentucky. Cash receipts from its sale totaled $756.2 million, 59 percent of all receipts from the sale of crop commodities.

For individual commodities, the leading counties were:

Tobacco - Barren
Soybeans - Daviess
Corn - Union
Wheat - Christian

Horses - Fayette
Cattle - Barren
Dairy - Barren
Hogs - Union

1/REVISED 7/86

COST OF PRODUCTION

FARM PRODUCTION EXPENDITURES

UNITED STATES

U.S. farm production expenditures totaled $125.9 billion in 1985, down 1.9 percent from the $128.3 billion in 1984. Lower expenditures for feed, interest, and capitalized items more than offset increased livestock and poultry purchases, labor expenses, and farm services. Farm services, including rent, represented the largest expenditures for farmers, accounting for 22 percent of the total. Feed expenses contributed 14 percent, livestock and poultry expenses 10 percent, and interest 10 percent.

The Corn Belt Region had the highest total expenditure in the U.S., accounting for 22 percent of the U.S. expenses, followed by the Northern Plains, with 13 percent of the total expenditures for the U.S. Seven of the ten production regions reduced expenditures from a year earlier while three regions had higher expenditures. The region with the sharpest decrease in total expenditures was the Delta Region with a drop of 13 percent. The Southern Plains had the largest increase with 1985 expenditures 13 percent above 1984.

Farms in the over $100,000 sales category accounted for 72 percent of the total expenditures. The $20,000-$100,000 category represented 20 percent of the total and farms with less than $20,000 sales, 8 percent. Large farms accounted for more than four-fifths of all expenses for labor, feed, and livestock and poultry expenses. The three major expenditure categories of farm services, feed, and purchases of livestock and poultry accounted for one-half of the total expenses for operations with sales over $100,000. For farms with sales between $20,000-$100,000 and less than $20,000, the three leading expenses were farm services, interest, and farm machinery.

APPALACHIAN REGION

Farm production expenditures totaled $8.5 billion for the Appalachian Region, 2.6 percent below the $8.7 billion of 1984. The Appalachian Region accounted for 6.7 percent of the U.S. expenditures. The average expenditure per farm in the Appalachian Region was $24,292 - down $316 from a year earlier. Expenditures for this region averaged less than half of the average for the Nation. Expenses per farm for all major items were below the U.S. average. The four major groups of farm services ($5,234 per farm), feed ($4,193), livestock and poultry ($2,187), and total farm machinery ($2,114) accounted for over half of all expenses in 1985. Less than one-tenth of the farms reported sales greater than $100,000 and they accounted for nearly three-fifths of the regional expenses. A fifth of the farms had sales of $20,000 - $100,000 and accounted for 24 percent of the expenses. Seventy percent of the farms realized less than $20,000 from sales of crops and livestock and they accounted for less than one-fifth of the total expenditures.

1/Appalachian: KY, NC, TN, VA, WV. 2/Excludes Alaska & Hawaii. 3/Farm Share. 4/Total expenditures divided by official number of farms published by NASS. 5/Totals may not add due to rounding. 6/Includes landlord expenditures. 7/Excludes veterinary supplies; bedding, litter, straw, & etc; purchase of capital equipment for livestock & poultry; repair & maintenance of livestock & poultry equipment; other non-capitalized equipment for livestock & poultry; & custom feeding of livestock on a per head or gain basis & grazing fees for livestock. Includes purchases & leasing expenses for all other livestock & livestock products (eggs, wool, milk, & leasing of livestock). 8/Excludes protein concentrates in 1985. 9/Includes custom feeding of livestock on a per head or gain basis & grazing fees for livestock. 10/Includes veterinary supplies. 11/Includes: tractors, other farm machinery, self-propelled machinery, fertilizer & irrigation equipment, trucks, autos & other motor vehicles (leased or rented). 12/Excludes telephone & water, but includes irrigation water cost & fees for 1985. 13/Excludes seed treatment. 14/Includes materials & applications. 15/Includes bedding, litter, straw & etc.; other non-capitalized equipment for livestock & poultry; excludes power farm shop equipment & motor supplies. 16/Includes repair & maintenance of livestock & poultry equipment & motor supplies. 17/Includes other motor vehicles purchased. 18/Includes purchase of capital equipment for livestock & poultry. 19/Includes power farm shop equipment. 20/Excludes bedding plants, nursery stocks & seed purchased for resale. 21/Includes seed treatment. 22/Excludes other motor vehicles purchased.

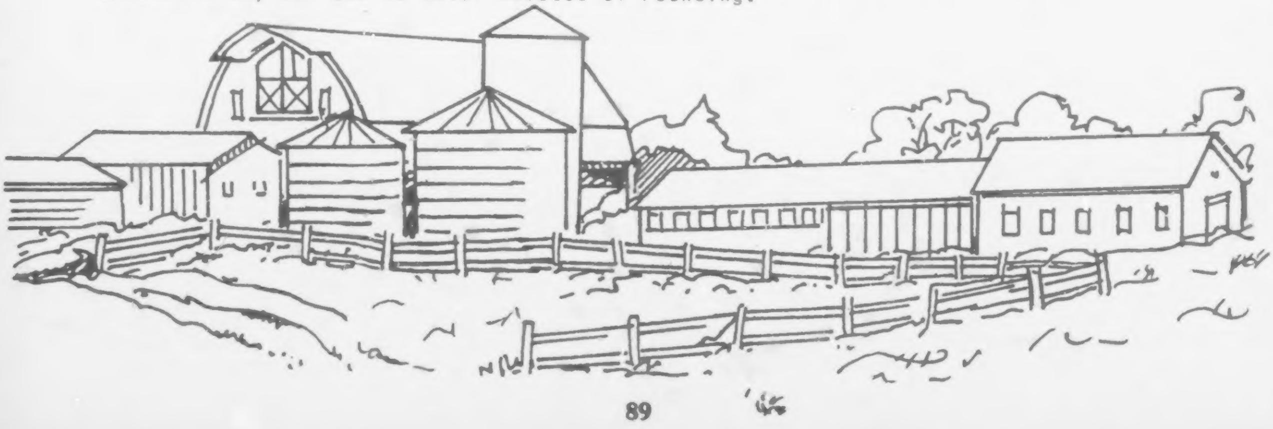
---

keting service, milk hauling, miscellaneous hardware, machine hire and custom work, miscellaneous livestock & poultry supplies, pesticides, small handtools, short-term interest, telephones, veterinary services and medicines, and other miscellaneous.
5/Includes depreciation of motor vehicles and other farm machinery and equipment.
6/Details may not add to total because of rounding.



1984 COST OF PRODUCTION

Cost of production estimates for the 1984 corn, soybeans and wheat crops show cash receipts well below production costs for all three commodities. The estimates assembled by USDA's Economic Research Service, reflect average costs reported in a survey of farm operators covering the 1984 crop. An individual's cost of production may vary considerably from these estimates depending on the structure of the individual's farm operation. For example, interest charges could be deleted if no money is borrowed for operating expenses or land charges could be dropped if the land is "paid off". Taxes, insurance, overhead and other items vary greatly from operation to operation. The operator's labor is included in the labor cost item and equipment depreciation is accounted for in capital equipment replacement costs. A closer estimate of an individual farm's costs of production can be determined by substituting the farm's actual costs for the estimates given in the tables. The University of Kentucky Cooperative Extension Service and county agents can assist farmers in developing cost of production budgets for their operations.

1984 CORN FOR GRAIN

Harvest-period Price ($/bushel)	$2.79
Yield (bushel/planted acre)	99.18 BU
Cash Receipts	$276.71

ITEM	COST PER ACRE	COST PER BUSHEL PRODUCED 1/

MISCELLANEOUS

FERTILIZER HIGHLIGHTS

Consumption of commercial fertilizer in Kentucky for the year ending June 30, 1985 amounted to 943,780 tons, down 6 percent from the previous year. Fertilizer consumption also decreased in most of the States bordering Kentucky, with the exception of Indiana, Tennessee and West Virginia. U.S. consumption totaled 49.0 million tons, down 2 percent from the previous year.

Mixtures accounted for 44 percent of the consumption in Kentucky, and direct application materials, including secondary and micro-nutrients accounted for the remaining 56 percent. The three most commonly applied mixed fertilizers were 18-46-0 (137,909 tons), 10-10-10 (51,955 tons) and 5-10-15 (44,367 tons). These three grades make up 57 percent of all mixtures used.

1/Data collected by Division of Regulatory Services, Agricultural Experiment Station, Lexington, Kentucky. Fertilizer sold as straight materials and miscellaneous products based on tonnage reports from manufacturers. 2/Includes superphosphate and triple superphosphate. 3/Includes minor nutrients, filler when reported separately & other fertilizers of unspecified composition.

FARM NUMBER HIGHLIGHTS

The number of farms in Kentucky in 1986 is estimated at 99,000, a drop of 1,000 (1 percent) from 1985. This is the lowest number of farms on record, but still ranks the Commonwealth fourth nationally. The only states with more farms than Kentucky are Texas (160,000), Missouri (115,000) and Iowa (109,000). A farm is defined as a place as of June 1 that sells or could sell $1,000 of agricultural products during the year. Land in Kentucky farms has remained stable at 14.5 million acres since 1982. The approximate total land area of Kentucky is 25.4 million acres, therefore, land in farms accounts for 57 percent of the total. The average size farm at 146 acres is the highest on record for Kentucky.

Farm numbers in the United States in 1986, estimated at 2.21 million, are down 3 percent from the 2.28 million in 1985 and down 9 percent from the 2.43 million in 1980. Total land in farms for 1986 is estimated at 1.01 billion acres, down 0.7 of one percent from a year earlier. Land in farms has declined every year since reaching its peak of 1,206 million acres in 1954. The average farm size in the United States increased to 455 acres, up 9 acres from 1985.

FARM EXPORTS

Value of agricultural exports from the United States decreased 18 percent from a year earlier for the Fiscal Year running from October 1, 1984 to September 30, 1985. Value of exports totaled $31.2 billion, a drop from the $38.0 billion in 1984. Reports indicate exports have continued to drop during the first five months of Fiscal Year 1986.

Tobacco along with feed grains and products enabled Kentucky to record a 9 percent increase in value during FY-85 while U.S. exports fell. Kentucky agricultural exports for the year ending September 30, 1985 totaled $707.6 million compared to the revised 1984 total of $648.4 million. Leading Kentucky exports were tobacco, live animals, feed grains, and soybeans. Kentucky ranked number two in unmanufactured tobacco and number three in live animals.

California became the leading farm export State, exporting $2.7 billion worth of farm goods. Iowa was second and Illinois third, but major agricultural export sales declined sharply in these States during FY-85. Texas rounded out the top four States which had agricultural export sales over $2 billion dollars.

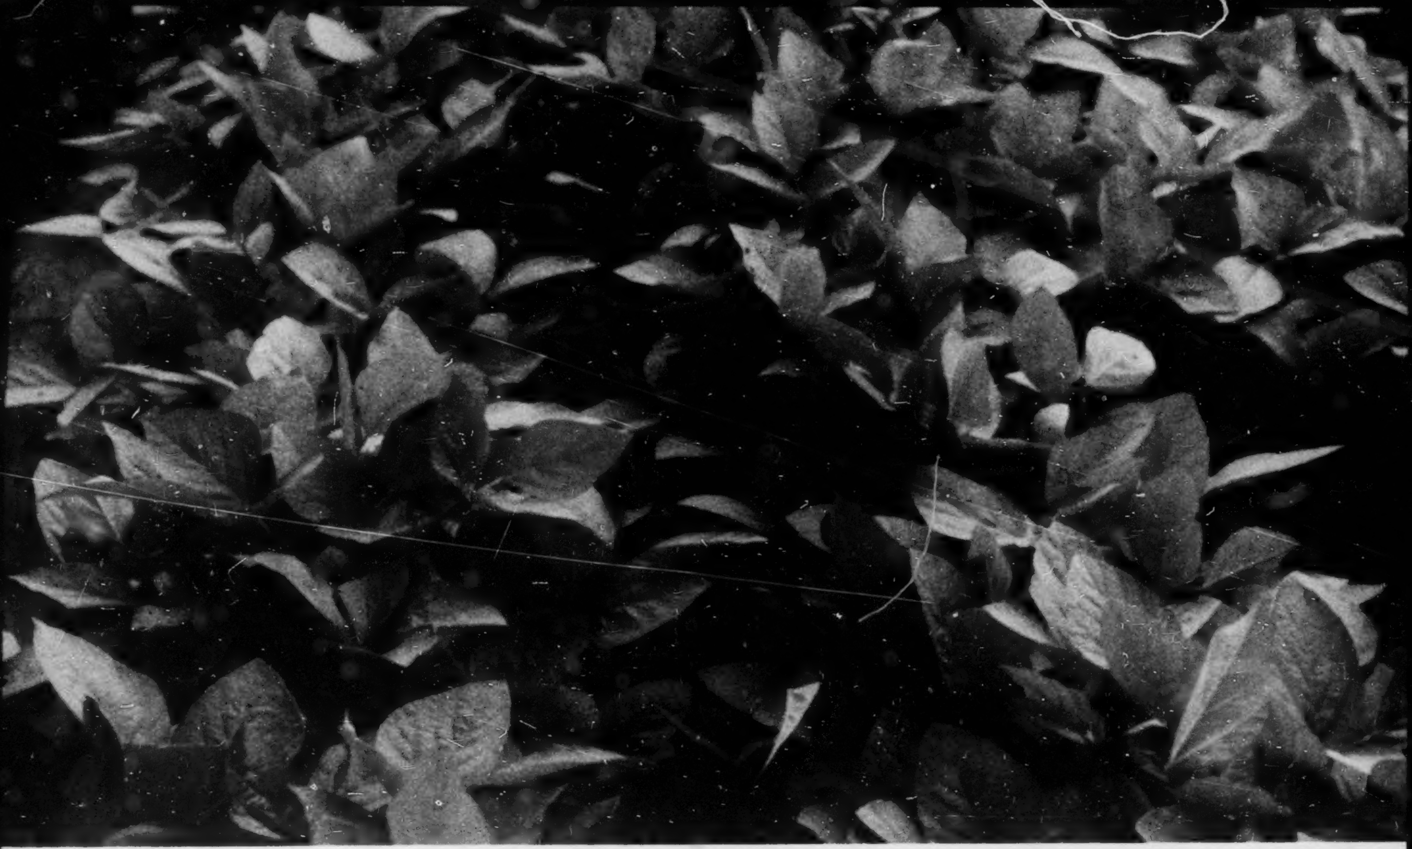
■ Export sales of $1 billion or more
▨ Export sales of $100 million to $999 million
☐ Export sales of less than $100 million

Fiscal 1985 export sales, in $ millions



COUNTY SUMMARY

COUNTY DATA

The following section highlights each county in Kentucky. Crops produced, livestock inventories, milk production and agricultural cash receipts are displayed with the appropriate rank among all counties. Data published here are available elsewhere in this bulletin, but this should aid data users interested in certain counties. Also, included for each county are the most current agricultural census data (1982) for number of farms, land in farms and harvested cropland acres.

Below is a table with data for the entire State. On succeeding pages each county is listed alphabetically. If you have any questions on this section, please get in touch with us. Let us know if you would like us to continue publishing county data in this format.

We're here to serve you!

The Kentucky Department of Agriculture provides a wide range of programs to meet the various needs of farmers, agribusiness and consumers. Its goal is to provide effective, cost-efficient service which will promote the growth of agriculture at the same time it makes consumers aware of how agriculture serves them.

Agriculture is a vital link in the chain of life -- keeping us fed, clothed and working.

Agriculture also brings notoriety to the Commonwealth. Kentucky is well-known around the world for its fine burley tobacco, outstanding thoroughbred horses, excellent livestock and quality fruit and vegetable crops.

That's why , in all phases of service by the Department of Agriculture staff, the slogan "Kentucky Soil Touches All of Us" is emphasized.

These numbers are listed to help Kentuckians obtain specific information or assistance from the various divisions in the Department of Agriculture. Call the department when you need help through one of our programs.

- Commissioner's Office (502) 564-4696

- Weights & Measures (502) 564-4870
- West Kentucky Office (Paducah) (502) 444-8162

OPERATION TELETIP

If you have a question about canning, buying life insurance, saving water or operating a chain saw, the Department of Agriculture's toll-free Teletip hotline can help. Teletip offers taped information on these and many other topics.

For a free copy of the Teletip catalog, which lists all topics available, contact the Division of Communications, Kentucky Department of Agriculture, 7th Floor, Capital Plaza Tower, Frankfort, KY 40601 or your county extension agent.

For Teletip information, call this toll-free number: 1-800-372-7602.

STATISTICAL REPORTS PROGRAM

In addition to this Annual Bulletin the Kentucky Agricultural Statistics Service publishes timely estimates on crop and livestock production, prices and various other special reports. A list of the more important reports and the approximate date of release is shown in the table below. Many of these reports are combined and republished in the twice-monthly Kentucky AGRI-NEWS. Due to budget restraints, there is a minimal charge for the AGRI-NEWS and Crop-Weather for non-reporters. Current reporters may receive these reports without charge. These reports may be obtained from the Kentucky Agricultural Statistics Service, P.O. Box 1120, Louisville, Kentucky 40201. PHONE: (502) 582-5293.

TYPE OF REPORT	FREQUENCY OF REPORT	APPROXIMATE DATE AVAILABLE
I. CROP REPORTS		
1. Intentions to Plant	Annually	March 30
2. Production of Field Crops & Fruits	Monthly (In Season)	10th - 12th
3. Grain Stocks	Quarterly	14th Jan; 30th Mar, June, Sept
4. Annual Crop Summary	Annually	January 15
5. Crop Values	Annually	January 23
II. LIVESTOCK REPORTS		
1. Cattle Inventory and Calf Crop	Semi-Annually	Jan 30-U.S. & KY, July 24-U.S. Only
2. Hog Inventory and Pig Crop	Quarterly	22nd Mar, June, Sept, Dec-Top 10 States, 23rd June, U.S.; 22nd Dec-U.S. & KY.
3. Sheep Inventory and Lamb Crop	Annually	January 28
4. Commercial Slaughter	Monthly	23rd
5. Meat Animals - Farm Production, Disposition & Income	Annually	April 3
III. DAIRY REPORTS		
1. Cows Milked & Milk Production	Monthly	15th
2. Milk Production & Disposition	Annually	May 7th
IV. POULTRY REPORTS		
1. Poultry Inventory, Dec. 1	Annually	January 28
2. Egg Production	Monthly	23rd
3. Hatchery Production	Monthly	23rd
V. PRICE REPORTS		
1. Prices Received by Farmers	Monthly	1st
2. Prices Paid by Farmers for Feed & Fuels	Quarterly	1st Feb, May, Aug, Oct.
VI. MISCELLANEOUS REPORTS		
1. Farm Income & Cash Receipts	Semi-Annually	March & September
2. Farm Numbers & Land In Farms	Annually	August 12
3. Farm Real Estate	Periodically	-
4. Farm Real Estate Taxes	Periodically	-
5. Farm Labor & Wage Rates	Tri-Annually	May 20, Aug 19, Nov 20
VII. CROP-WEATHER		
(April-November)	Weekly	Mondays, 3:00 P.M.
VIII. COUNTY ESTIMATES		
(Major Commodities & Cash Receipts)	Annually	February - May

September 1986
